

Dine3D – Job Description (Software Developer)

Company Overview

Dine3D is a technology-driven company specializing in interactive digital solutions, including 3D menus, smart restaurant systems, and modern web applications for the hospitality industry.

Role Overview

We are looking for a skilled Software Developer to join our growing team. The ideal candidate will work on building scalable web applications, interactive user experiences, and backend services that power Dine3D's products.

Key Responsibilities

- Develop and maintain web applications and dashboards
- Build scalable backend APIs and services
- Work with modern frontend frameworks and UI components
- Integrate third-party services and payment gateways
- Collaborate with designers and product teams
- Debug, optimize, and improve application performance

Required Skills

- Strong knowledge of JavaScript / TypeScript
- Experience with React or similar frontend frameworks
- Experience with Node.js / NestJS backend development
- Knowledge of REST APIs and databases
- Familiarity with Git and deployment workflows

Preferred Skills

- Experience with cloud platforms and VPS deployments
- Understanding of 3D, WebGL, or interactive UI concepts
- Experience with Electron or mobile development is a plus

What We Offer

- Opportunity to work on innovative 3D-based products
- Flexible work environment
- Growth-focused and collaborative team culture
- Competitive compensation based on skills and experience

Location

Hybrid / Remote (India)
